PROTOCOL

KISSPEPTIN-10mg

01 WHAT IT'S FOR

Kisspeptin is a hormone-signaling peptide that plays a key role in regulating testosterone production, fertility, libido, reproductive health, and hormone balance. Unlike testosterone replacement therapy, Kisspeptin works upstream by stimulating your body's own natural hormone production. Think of it as a peptide that helps "wake up" your natural hormone signaling pathways.

02 HOW IT WORKS

Kisspeptin stimulates the hypothalamus to release GnRH (Gonadotropin-Releasing Hormone), which signals the pituitary gland to produce LH and FSH. These hormones then stimulate the testes or ovaries to produce natural sex hormones. In men, this can support healthy testosterone production. In women, it plays an important role in reproductive hormone signaling.

03 HOW YOU'LL FEEL

Many users report improvements in libido, mood, motivation, confidence, and overall wellbeing within the first few weeks. Men often notice improved morning erections, increased sexual desire, and improved energy. The effects are generally subtle and natural rather than dramatic or artificial.

04 WHO IT'S FOR

Ideal for men seeking natural testosterone support, individuals looking to improve libido, those coming off hormone suppression, and people interested in optimizing reproductive hormone function.

05 WHO IT'S NOT FOR

Not recommended for pregnant or nursing women. Individuals with hormone-sensitive cancers or serious endocrine disorders should consult their healthcare provider before use. Not intended to replace medically necessary hormone therapy.

06 DOSING PROTOCOL

- Add 2ml (200 units) bacteriostatic water to the vial
- Draw 10 units daily
- Inject subcutaneously once daily
- Best taken in the morning
- Typical cycle length: 8-12 weeks

Many users notice the best results when Kisspeptin is combined with proper sleep, resistance training, and adequate nutrition.

07 IMPORTANT

- Kisspeptin stimulates natural hormone production rather than replacing hormones
- Results are generally gradual and natural
- Bloodwork before and after a cycle is recommended
- Lifestyle factors significantly influence results

08 SIMPLE BREAKDOWN

Daily Protocol

Every Morning

- Draw 10 units
- Inject subcutaneously
- Continue daily

09 COMMON SIDE EFFECTS

- Mild headache
- Temporary flushing
- Increased libido
- Mild injection site irritation

Most users tolerate Kisspeptin extremely well.

10 BEST STACKS

With CJC-1295 (No DAC)

Combines hormone optimization with recovery, growth hormone support, and body composition benefits.

With HCG

Often used by men focused on fertility, testosterone production, and reproductive health.

With MOTS-C

Supports metabolic health, energy production, recovery, and overall vitality.

11 WHAT TO EXPECT

Week 1-2

- Increased libido
- Improved mood
- Better motivation

Week 3-6

- Enhanced energy
- Improved sexual health
- Greater sense of wellbeing

Week 6-12

- Improved hormone optimization
- Better recovery
- Sustained improvements in libido and vitality

12 Where to get it:
